Professional Summary

Software analyst with 2 years of experience across backend development, data engineering, and business automation. Delivered production systems including ML-based churn prediction, demand forecasting, and an automated email-to-ticket pipeline that eliminated daily manual work for a Bank of America operations team. Actively building AI and agentic tooling using LangChain and LangGraph.

Work Experience

Acintyo Tech Innovations

Mar 2026 – Present

Software Analyst (formerly Data Engineer Intern, Apr–Jul 2024)

Hyderabad, India

- Joined as a Data Engineer Intern: built ETL pipelines (MongoDB → Pandas → MySQL) processing 50K+ records daily, deployed FastAPI services on AWS EC2 with Docker, and automated daily Excel report delivery to the business team — returned full-time as Software Analyst in March 2026.
- Building a distributor analytics platform for 2+ distributors, covering product recommendations, sales analytics, and automated WhatsApp notifications to retailers.
- Built a retailer churn prediction model using XGBoost, identifying 75% of at-risk retailers before lapse; built a copurchase analysis module to guide inventory planning proactively.
- Implemented live rider tracking using Redis to cache real-time location updates, cutting delivery status latency by 35%.
- Integrated product recommendation and WhatsApp messaging APIs, enabling fully automated retailer outreach without manual intervention.

Tata Consultancy Services (Client: Bank of America)

July 2024 – March 2026

Analyst

Ahmedabad, India

- Built an email-to-JIRA automation pipeline that parsed incoming emails, extracted structured data, and created ~3 tickets/day without human involvement — eliminating a daily manual process done by the operations team.
- Implemented the email parsing logic in Python and connected it to the JIRA API via FastAPI; built JIRA dashboards giving stakeholders real-time visibility into open issues and resolution progress.
- Collaborated with the operations team to identify the most critical data fields, iterated based on direct feedback, and delivered a system reliable enough to run unsupervised daily.

Projects

Automation Agent | LangChain, LangGraph, Python

2025

- Built a LangGraph-based agent that accepts a natural language task, plans sub-tasks using an LLM reasoning loop, and executes them autonomously via tool calls to external APIs — implemented the full agentic loop: planning, conditional branching, stateful execution, and tool chaining across multi-step workflows.

Surface Crack Detection — U-Net & Grasshopper Optimization | PyTorch, OpenCV, GANs

- Built a surface crack detection system using U-Net segmentation, achieving 98.5% accuracy. Applied a grasshopper optimization algorithm to improve small-crack detection and used GAN-generated data to improve robustness across varying lighting and surface conditions.

Skills & Certifications

Languages: Python, JavaScript, SQL

Backend & APIs: FastAPI, Node.js, REST APIs

AI & Automation: LangChain, LangGraph, Claude API, Prompt Engineering, Automation Agents, NLP

Frontend: React.js

Databases & Tools: PostgreSQL, MySQL, MongoDB, Redis, Docker, AWS (EC2, S3), Git, JIRA

Data & ML: Pandas, XGBoost, ETL Pipelines, Data Modelling

Certifications: Microsoft Certified: Security, Compliance & Identity Fundamentals | Operating Systems: Power User – Coursera

Education

Vellore Institute of Technology

B.Tech – Computer Science and Engineering

Aug 2020 – June 2024

CGPA: 7.7/10

Jupyter Junior College

Intermediate – MPC

Aug 2018 – Sep 2020

CGPA: 9.6/10
